## Midlandscapes

AUSTRALIA

**BUSH HERITAGE** 

Tasmania

**Greening** Australia

## Introduction

- Why the Tasmanian Midlands
- Planning using the Open Standards Conservation Action Plan: Targets, goals, strategies, business
- Saving the best: Midlands Conservation Fund Tasmanian Land Conservancy, Bush Heritage Australia
- Connectivity: revegetation and restoration
   Greening Australia
- Monitoring, research and future challenges
- Conclusions

HERITAGE TASMANIAN Land CONSERVANC

## Planning using Open Standards

#### 1. Conceptualize

- Define initial team
- · Define scope, vision, targets
- Identify critical threats
- Complete situation analysis

Conservation

Measures

Partnership

Open Standards

### 5. Capture and Share Learning

- Document learning
- Share learning
- Create learning environment

### 2. Plan Actions and Monitoring

- Develop goals, strategies, assumptions, and objectives
- Develop monitoring plan
- Develop operational plan

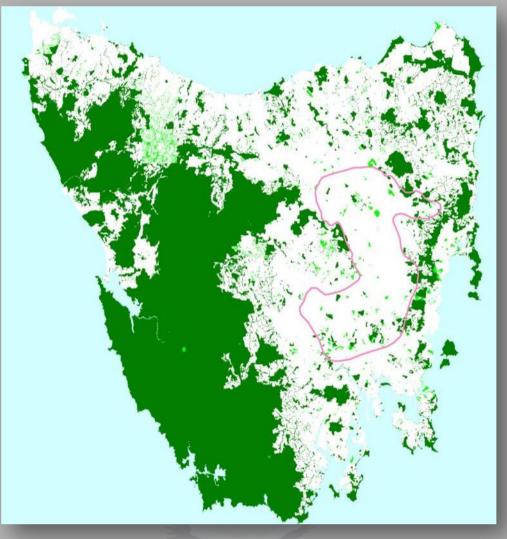

#### 4. Analyze, Use, Adapt

- · Prepare data for analysis
- Analyze results
- Adapt strategic plan

### 3. Implement Actions and Monitoring

- Develop work plan and timeline
- Develop and refine budget
- Implement plans

## Midlandscapes Overview

Where – Tasmanian Midlands Biodiversity Hotspot

Why – Threatened species, Endemic species, Low % reservation, High conservation values

### Initiating partners

- Tasmanian Land Conservancy
- Bush Heritage Australia
- DPIPWE

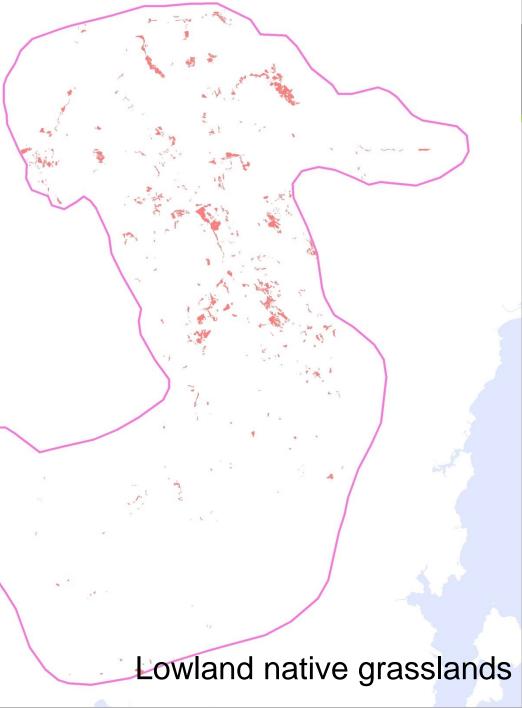

### Landowners

### CAP Elements

- Landscape scale planning spatial, objective and business driven
- Key Conservation Assets
  3 ecological communities
  - 3 geomorphic units
  - 3 sets of vulnerable fauna
- Engaged with local landowners in planning phase
- Thesis 64,000 ha of the Assets managed for conservation by 2020
  - Initially one key strategy: save the best with MCF
- Monitoring plan developed Indicators selected >>>> Adaptive management

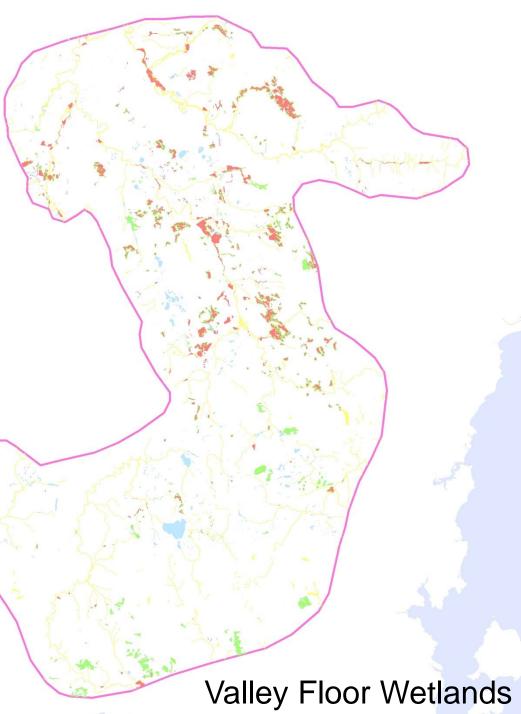

### Grassy woodland bush runs

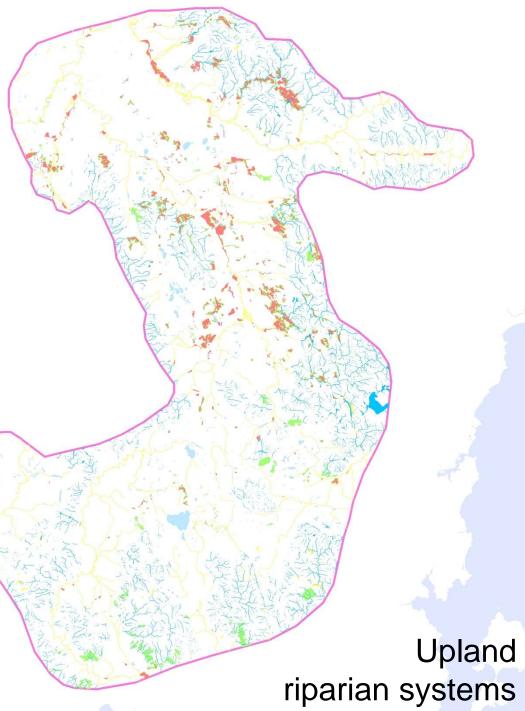

in .

Lowland alluvial systems

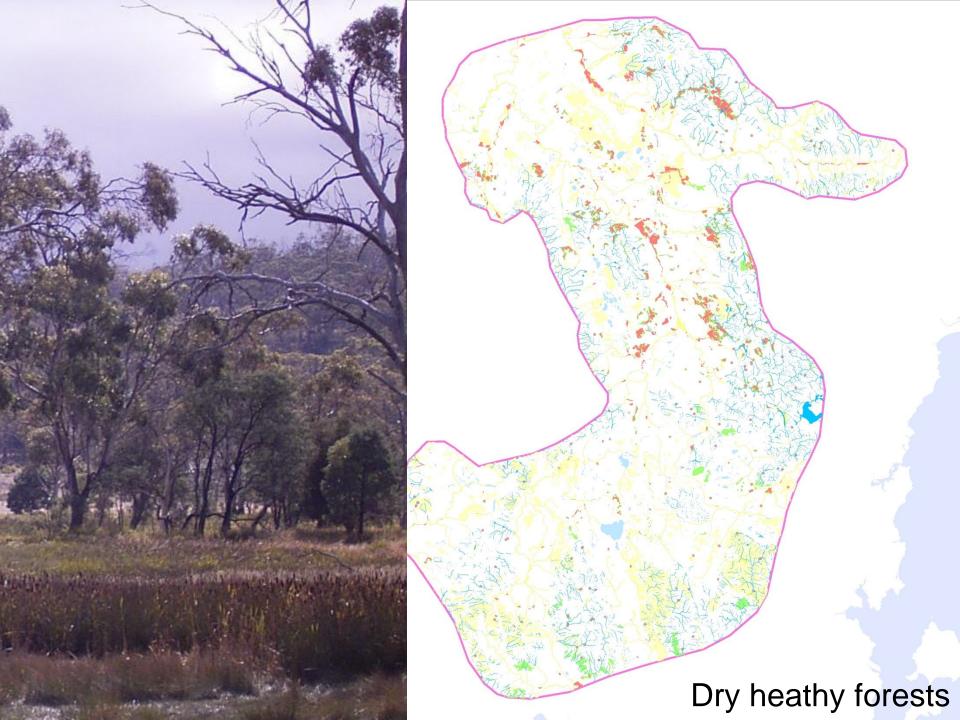

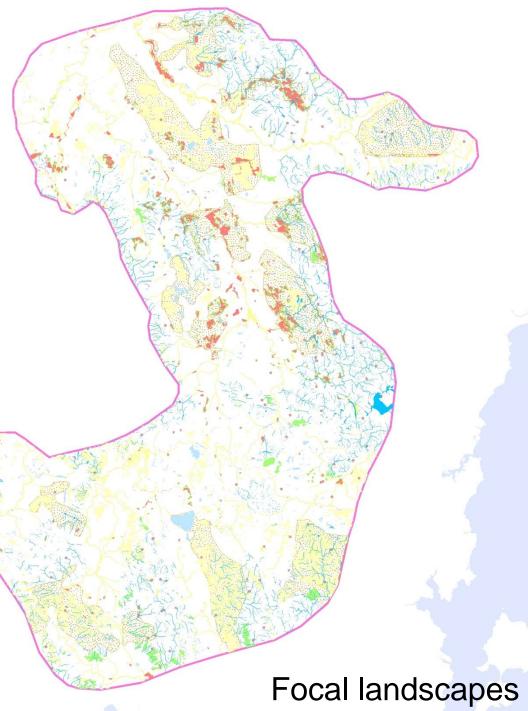

Wedge-tailed eagles

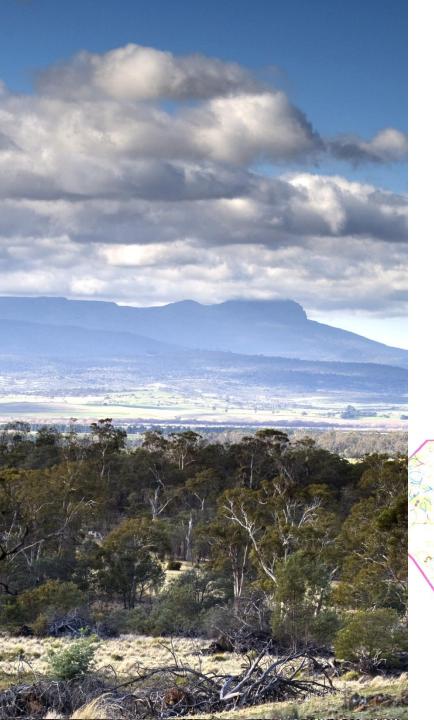

Vulnerable mammals & Woodland birds

### Connectivity V1

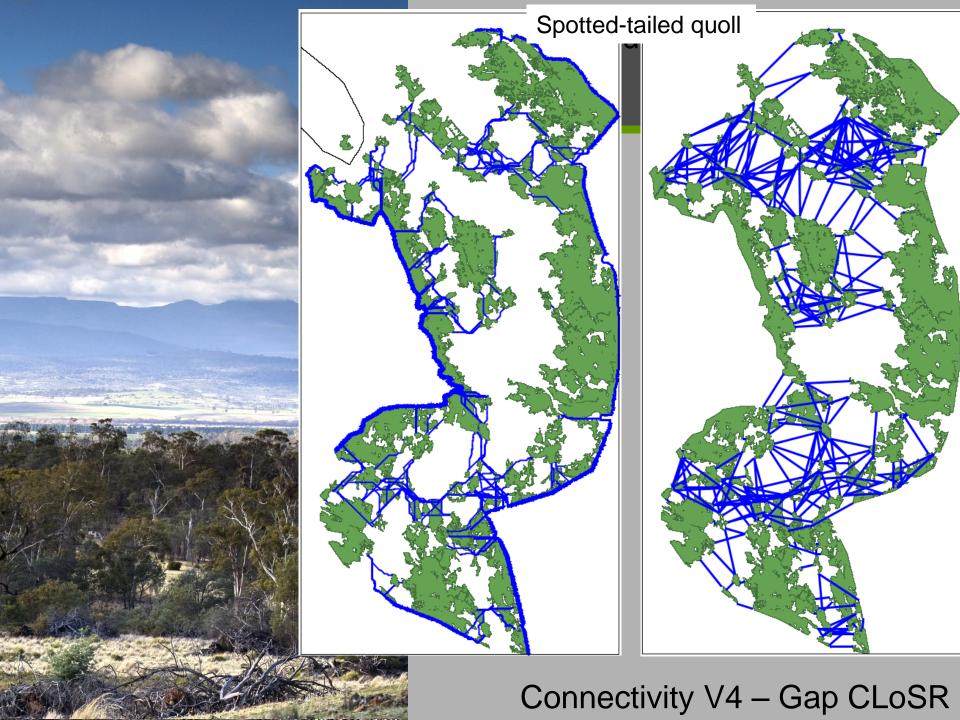

# Vulnerable mammals & Woodland birds

### Connectivity V2

Vulnerable mammals & Woodland birds

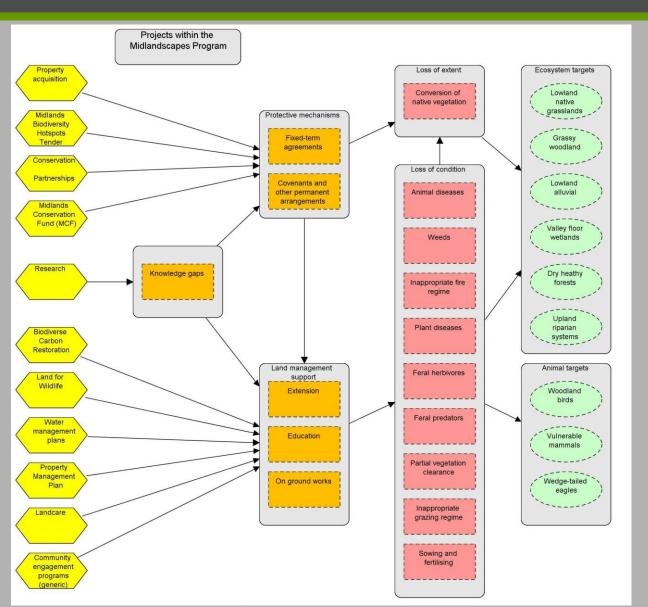

Connectivity V3 - restoration

### Fauna Assets and connectivity

**Becoming better understood** First pass – which remnants Ő. are critical What habitat elements are critical Then the expensive option of revegetation Modelling showing that it is not too late

### Program model successes

- Collaboration with landowners, public, private sector
- Careful planning and review
- Wide range of projects – some formally part of Midlandscapes
- Strengthening ties between projects
- Core partners offer long-term governance, management & extension

### Funding and protection mechanisms

### Funding Sources:

outcome

- Private philanthropy various foundations and bequests
- Government programs
- Industry offsets offset requirements
- Carbon credits & potential other ecosystem services

### Protective Mechanisms:

- Voluntary conservation covenants
- Evergreen or fixed-term conservation contracts
  - Property acquisition
- Forestry rights / carbon agreements

No single funding source or mechanism will achieve

## Conservation enterprise model

Income stream for conservation services

Alliance Based on mutual trust and review

Propert Design concert with landow free Sights: could be perpetual with 'out clause' or fixed term

• Used modelling, land prices and tenders to

Periodic payments for conservation services: rolling contract based on outcomes and review

- Seeks to balance risk
  - Reputeomes based: learn by doing
    - .. actual costs on both sides; and

gauge \$\$

initial period

Funded by perpetual endowment

Transforming our landscapes

# Strategic restoration in the Northern Midlands of Tasmania: 1000 ha underway

www.greeningaustralia.org.au

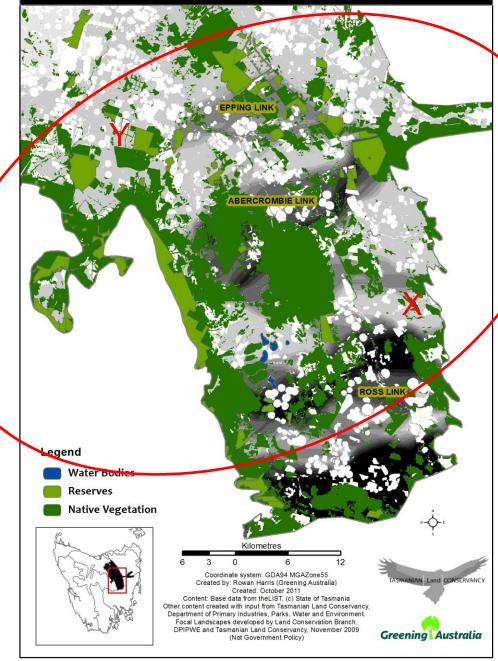

# Modeling for restoration

**GIS patch-linkage model for wildlife corridors** (GA, TLC, BHA, DPIPWE)

> Sites chosen: X – Ross corridor: Julian von Bibra ('Beaufront') Simon Foster ('Fosterville') Y – Epping corridor: Roderic O'Connor ('Connorville')

Landscape Linkage in the Northern Midlands Bioregion Version 1

**Note:** the project will revegetate the area in this picture between the river and the fence

## Broad - scale woodland revegetation

Transforming our landscapes

www.greeningaustralia.org.au

## Patch - scale Woodland restoration

Transforming our landscapes

### Individual trees and groups of 10 trees and shrubs

### Grassland revegetation using local seed

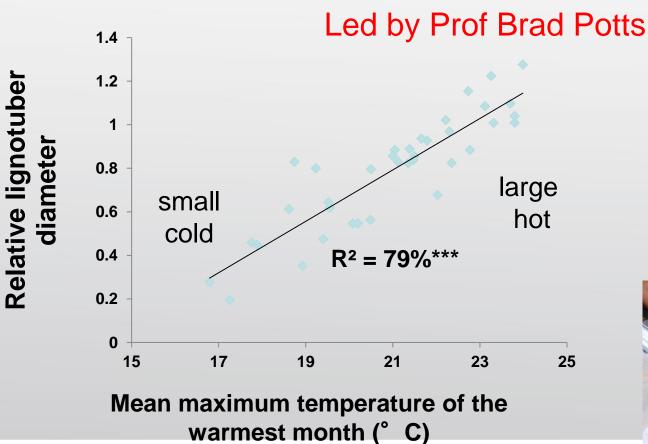

## Monitoring and collaboration with UTas

- Collaborating researchers embed research experiments in existing agreements
- Allows for adaptive management and improvement
- Use of BACI design (before and after control and impact) for revegetation and restoration

# UTas (ARC-linkage) studies on genetic variation in *Eucalyptus* and climate change

% traits associated with climatic factors 38% P<0.001 76 % P<0.05

# UTas (ARC-linkage) research "Animal centric view of connectivity"

Led by Dr Menna Jones

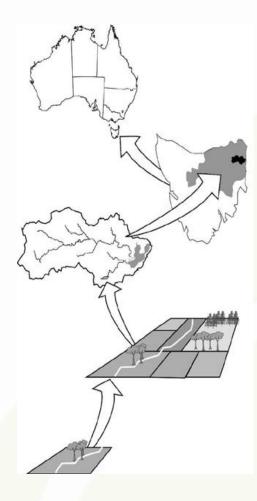

- What do animals see as habitat/not?
- Selected mammals, birds and bats
- Three scales
  - Occupancy using cameras, scats
  - Movement using GPS, giving up density
  - Degree of population isolation using genetics
- Future restoration design

### Future challenges

Effective landscape scale monitoring
Responses to climate change
Sovereign risk

### **LANDSCAPES &** POLICY hub

### Assessing landscape scale change

Scale of Inquiry	Types of evidence		
	Land manager experience	Expert opinion	Quantitative data
<b>Landscape</b> pattern	Interviews, Focus groups, Landscape history workshops	Conceptual models, Bayesian network models	Remote sensing, Snap shot surveys, Space-for-time substitution surveys
<b>Property</b> people	Surveys and interviews	Bayesian network models of response to intervention	Census data State and regional investment data
<b>Site</b> process	Surveys and interviews	Bayesian network models, State and transition models	Field surveys, Surveillance monitoring

Landscapes and Policy Hub

Slide #41

### Conclusions

- Collaboration with landowners, Govt., NRM bodies, NGOs, industry assoc. etc.
- Landscape-scale approach regardless of jurisdiction.
- A comprehensive and long-term plan is critical prioritise investments and measure progress towards goals over time.

Financial modelling to attract investment

 Spatial modelling underpinned by sound ecological principles to guide investment

### Conclusions

- Endowment fund provides means to perpetually fund long-term conservation agreements and outcomes.
- Analyse & adapt complete the project management cycle and learn from past actions.
- Careful use of MBIs balance conservation outcomes vs. value for money.
- Research and monitoring to inform action and adaptation
