**EIANZ NSW Innovation Series – Third installment**

Have you noticed the emerging proliferation of data sensors, the Internet of things, analytics, artificial intelligence, robotics, augmented and virtual reality? The digital realm is increasingly disrupting business as usual in the mainstream, but what about for those of us in the environment sector? What technologies are most relevant to us and our organisations, which of them are mature enough to be used now, and if not, when will they be so? What strategy should be taken to best respond to these rapidly growing trends?

### **Presentations will be given by:**

- Chris Fechner,  
Chief Information Officer from NSW  
Department of Planning & Environment
- Lee Stuart  
Head of Sustainability of Fujitsu
- Rick Walters  
General Manager, Sustainability from UGL

*After presentations have been delivered, a panel session will be convened to discuss this fascinating topic.*
