

SEMINAR SERIES

BROUGHT TO YOU BY THE ACT GOVERNMENT &
ENVIRONMENT INSTITUTE OF AUSTRALIA AND NEW ZEALAND

ADAPTING OUR CITIES FOR CLIMATE CHANGE

Focusing on the people who live in cities and how
those cities work for them

Jane Jacob's *Life and Death of American Cities* focused on people who live in cities and the shape of civic infrastructure required for the social ecology of the city to work. That perspective is critical in considering how to adapt and transform our cities to provide resilience to the impacts of climate change.

This talk will:

- highlight the challenges of adapting a city to respond to an evolving problem
- identify some of the issues that could impact Canberra
- consider examples of initiatives for adaption for climate change from other cities, and
- look at how cities engage their communities and businesses in processes of change and transformation.

Environmental and other professionals across the ACT are welcome to attend.
